Summary

Analytical and results-driven **Contract Web Developer** with a proven track record of architecting scalable frontend components, optimizing web performance, and deploying full-stack solutions. Experienced in managing independent technical contracts, collaborating across distributed teams, and translating complex business requirements into clean, maintainable codebases utilizing modern JavaScript ecosystems.

Education

Buena High School Sierra Vista
General Education

Experience

Dev Wave -Software Engineer (Contract) Remote
Contract 2025-Present

- **Architected and deployed** responsive web applications utilizing modern JavaScript frameworks, improving frontend render times and user retention metrics.
- **Collaborated with cross-functional stakeholders** to translate business logic into scalable, clean, and maintainable codebase components under strict sprint deadlines.
- **Optimized database queries** and state management systems, reducing API latency and improving overall application stability across desktop and mobile platforms.
- **Managed full-lifecycle deployments** using version control protocols, ensuring seamless integration and zero-downtime rollouts for client production environments.

Amazon Chesapeake, VA
Logistics and Operations Associate 2022 - 2025

- **Managed localized supply chain workflows** and inventory tracking architectures, maintaining 100% accuracy metrics across physical database systems.
- **Utilized internal enterprise resource planning (ERP) software** to audit incoming logistics pipelines and streamline facility throughput parameters.
- **Collaborated with cross-functional floor supervisors** to diagnose operational bottlenecks and enforce strict quality assurance protocols under heavy delivery timelines.

Projects

organizeME — Distributed Project Workflow Engine 2025-Present • Architected and deployed a multi-board workspace application using state-driven UI logic, enabling seamless real-time management of parallel corporate project pipelines. • Engineered dynamic data synchronization algorithms to calculate and track nested subtask completion states accurately while preserving session integrity across device reloads. •	Enterprise B2C E-Commerce Storefront Engine 2025-Present • Architected a highly responsive B2C e-commerce platform utilizing modern JavaScript rendering patterns to maximize product discovery and user conversion. • Engineered a centralized state management basket matrix using custom providers to accurately handle persistent add-to-cart operations and client checkouts. •
--	---

- Implemented secure cascading deletion modals and state safety boundaries, preventing accidental loss of structural tea boards, columns, and relational user tasks.

Optimized viewport performance by creating a collapsible fluid-layout sidebar navigation matrix, maximizing visual landscape utilization across varied enterprise screen sizes.
- Optimized media asset delivery pipelines and layout boundar rules, cutting page weight metrics to ensure fast loading spee across mobile and desktop viewports.

Implemented dynamic sorting arrays allowing prospective buyers to cleanly filter product catalog inventories by price, category, and real-time inventory tags.
